## Selected Projects

### **Gemini 2.0 – Search, Analyze, Plot Agent (2024)**

Gemini 2.0 was trained to use tools like Google Search and code execution in addition to custom third-party functions via function calling. It can be used to search the web, analyze gathered data in Python, and create a plot using libraries such as Altair.

### UI Grounded Instruction Following for educating Novice Users (2022)

Novice Internet Users tend to use only basic phone features like calling and messaging. UGIF shows users how to use the phone by using a large language model to transform FAQ pages to step-by-step demonstrations overlaid on the UI.

### Natural language instructions to code for robot manipulation (2020)

A machine translation model generates a program which queries the scene by accessing the output of the object detector and controls the robot to accomplish the specified task.
